

input	function	output
length and width		5 l, 5 w = 25
find if the two inputs equal each other, if so multiply them, else add them then multiply them by 2		2 l, 3 w = 10

1. //const function name areaOrPerimeter
assigned to function param l, w

2. //return l equals w turnary op l * w if truthy 2 * l plus w if
falsy
